NEMA 4 (IP66) OEM INDUSTRIAL KEYBOARD

## KI6800 OEM INDUSTRIAL KEYBOARD

CTI's OEM KI6800 Series Industrial Keyboards are comprised of a durable Printed Circuit Board (PCB), a rubber silicone Elastomer, and an optional USB cable. The PCB is designed for protection against electromagnetic and radio frequency interference as well as electro static discharges. Upon the PCB is a layer of hard plated gold used for the switching contacts of the Keys. Molded under each Key of the Elastomer are four hard carbon pill contacts which provide reliability and durability. This Elastomer features a time tested durometer that provides an ergonomic key stroke with excellent tactile feedback. It also includes a special molded O-Ring which compresses to ensure a watertight seal. In addition, the Elastomer has been treated with a thermally infused silicone ink to create the QWERTY legend and then sealed through CTI's special formulated flexible polyurethane coating process (Syn-Proof™). Lastly, installation is easy since the Elastomer has bosses which hold the PCB assembly together, thus no messy glue or sealers are required.

The NEMA 4 (IP66) sealing Industrial Keyboards are most suitable for critical applications requiring high durability (10+ years), high reliability (99.999% availability), and/or ensured performance under extreme operating temperatures, exposure to harsh climate conditions, and/or solid and liquid contaminants. It's well protected against high vibration, EMI/RFI signals, bio-hazardous agents, and cleaning solvents. This compact keyboard with its shallow depth below panel minimizes area requirements. Finally, for those low level lighting situations, the backlit KI6800-Bx Series offers ten levels of illumination.

These OEM Industrial Keyboards are offered to Original Equipment Manufacturers as an open frame module with exposed electrical components that requires mounting and encasement. The properly positioned through holes of the PCB and Elastomer will ensure a NEMA 4 (IP66) watertight sealing over a broad operating temperature range when fastened into a metal enclosure. The combined features of the OEM Industrial Keyboards meet and/or exceed industry standards specifications.

## KI6800 STANDARD FEATURES

- NEMA 4 (IP66) sealing when properly installed
- Standard Operating Temperature -40°C to 80°C (-40°F to 176°F)
- High reliability and durability (MTBF 100,000+ hours, 10,000,000+ cycles)
- Key contacts are comprised of a thick layer of hard gold on PCB and hard carbon pills molded into the Silicone Rubber Elastomer
- 2mm Key travel with excellent tactile feedback to operator
- Thermally infused silicone ink into the Elastomer ensures long term readability
- SynProof™ coated Elastomer protects from penetration of harsh oils and chemicals
- A thick 0.06" PCB ensures rigidity under pressure and protection of electronic components
- PCB layout offers EMI/RFI shielding and Ground Connection (ESD)

Standard Driver	Windows OS USB Keyboard Driver			

## KI6800 ELECTRICAL SPECIFICATION

MTBF	Greater than 100,000 hours
Cabling	Shielded USB Cable (9.5 feet)
Ground Connection	Yes
EMI/RFI Shielding	Designed into PCB Layout
ESD Protection	8Kv (Contact), 15Kv (Air)

## KI6800 MECHANICAL SPECIFICATION

Life Expectancy	Elastomer Keys 10,000,000+ actuations/cycles(hard carbon pills, hard gold plated PCB)		
Shock	Peak Value 40g (typical)	Peak Duration 11ms	Waveform Half Sine
Vibration	Frequency / Displacement 10-55 Hz @ 0.013 DA		

## KI6800 ENVIRONMENTAL SPECIFICATION

Operating Temperature	-40° to 80° C / -40° to 176° F
Storage Temperature	-40° to 80° C / -40° to 176° F
Relative Humidity	100% condensing
Sealing Rating	NEMA 4 (IP66) (when properly installed)
Protection	SynProof™ Coated (Standard) - protection against harsh oils and chemicals Parylene Coated (Optional) - toughest molecular barrier protection
