Shown above KIT6000 Industrial Keyboard with Trackball

KIT6000 STANDARD FEATURES

- NEMA 12 (IP54) sealed
- Standard Operating Temperature -40°C to 80°C (-40°F to 176°F)
- High reliability and durability (MTBF 100,000+ hours, 10,000,000+ deflections)
- . Key contacts are comprised of a thick layer of hard gold on PCB and hard carbon pills molded into the Silcone Rubber Elastomer
- 2mm Key travel with excellent tactile feedback to operator Thermally infused silicone ink into the Elastomer ensures
- long term readability
- SynProof[™] coated Elastomer protects from penetration of harsh oils and chemicals (optional Parylene coating)
- A thick 0.06" PCB ensures rigidity under pressure and protection of electronic components
- PCB layout offers EMI/RFI shielding and Ground Connection (ESD)
- Metal Enclosure is passivated Stainless Steel or iridited Aluminum
- Stainless Steel Threaded Inserts on bottom plate for surface mounting
- 9.5 foot USB Cable with Strain Relief to prevent cable damage.
- 1.3" (33mm) Diameter Trackball

KIT6000 USB INDUSTRIAL KEYBOARD WITH TRACKBALL

CTI's KIT6000 Series Plug-n-Play Industrial Keyboard are comprised of a durable Printed Circuit Board (PCB), a rubber silicone Elastomer, a Trackball (aerospace grade mouse), a metal enclosure, and a USB cable. The PCB is designed for protection against electromagnetic and radio frequency interference as well as electro static discharges. Upon the PCB is a layer of hard plated gold used for the switching contacts of the Keys. Molded under the Key of the Elastomer are four hard carbon pill contacts which provide reliability and durability. This Elastomer features a time tested durometer that provides an ergonomic key stroke with excellent tactile feedback. It also includes a molded special O-Ring which compresses to ensure a watertight seal. In addition, the Elastomer has been treated with a thermally infused silicone ink to create the QWERTY legend and then sealed through CTIs' special formulated flexible polyurethane coating process (Syn-Proof™). Ensuring a tight seal, these keyboards are encased in the finest grade stainless steel which is passivated or a painted aluminum which is iridited. Finally, for those low level lighting situations, the backlit KIT6000-Bx Series offers ten levels of illumination.

The NEMA 12 (IP54) sealed Industrial Keyboard is most suitable for critical applications requiring high durability (10M+ cycles), high reliability (99.999% availability), and/or ensured performance under extreme operating temperatures, exposure to dust particles and/or light liquid contaminants. It's well protected against high vibration and EMI/RFI signals. This compact keyboard with its stainless steel threaded inserts on the bottom plate allows for affixing to a panel or desktop. Finally, for those low level lighting situations, the backlit KIT6600-Bx Series offers ten levels of illumination.

These Plug-n-Play Industrial Keyboards are offered to the Systems Integrator or Commercial End User with an assurance of high reliability, long term durability, and performance under normal operating conditions. Designed for extremely fine mouse cursor control applications these rugged compact keyboards are an excellent solution for military, marine, medical, nuclear plants, radar systems, etc. The combined features of the Plug-n-Play Industrial Keyboards meet and/or exceed
